DNS  
complete!

## Let's get your mail going to the right place

Before we can finish setting up your account, we need to verify that you own **yenkodev.com**.

1. Log in to your account with your current DNS host. [What is DNS?](#)
2. Set the following TXT records.

**Name:** D8019436

**TXT Value:** v=spf1 include:secureserver.net -all

3. **CNAME Records:** Find where to add a CNAME record and enter:

**Host:** email

**Points to:** email.secureserver.net

4. **MX Records:** Find where to add an MX record and enter:

Romulo logged in as: Luis Daniel Pambid

**Priority:** 0  
**Target:** smtp.secureserver.net

---

**Host:** @  
**Priority:** 10  
**Target:** mailstore1.secureserver.net

---

5. **SRV Records:** Find where to add an SRV record and enter:

**Port:** 443  
**Protocol:** \_tcp  
**Name:** @  
**Service:** \_autodiscover  
**Priority:** 100  
**Weight:** 1  
**Target:** autodiscover.secureserver.net

---

If you have existing email destination records on your domain, you need to delete the old records before your Professional Email will work. Any changes you make to your records can take up to 24 hours to take effect.
